(Communication skills)

This course aims to acquire the postgraduate diploma students with concepts, principles and theories of human communication to apply effective communication during critical and emergency nursing care.

(Health education)

This course aims to provide postgraduate diploma students with advanced concepts of health education that help them to disseminate proper health concepts for critically ill patients and their family to reduce morbidity, mortality and death rates.

(Emergency and Critical Nursing)

This course aims to provide postgraduate diploma students with advanced knowledge and skills related to emergency and critical nursing to be qualified nurses in the field of critical and emergency nursing, capable of providing high quality nursing care and continuous learning and up to date with the developments and professional challenges.

(Emergency and Critical Medicine)

This course aims to provide postgraduate diploma students with advanced aspects of critical medicine especially treatments issues and interventions to support the body's organs in a timely manner.

(Psychological and social aspects of emergency and critical patients)

This course aims to acquire the postgraduate diploma students with psychological and social aspects to help students to be able to provide proper critical and emergency nursing care. Students should also know how to establish a helpful relationship taking into account cultural differences in communicating with the patient.

(Modern technologies and different treatment methods for emergency and critical patients)

This course aims to acquire the postgraduate diploma students with different therapeutic methods, information technology and clinical information to obtain and manage data, convert data into actionable information, and then publish this information so that it can be used effectively to improve patient care in intensive care and emergency unit.

(Legal and ethical aspects of nursing)

This course aims to acquire the postgraduate diploma students with legal and ethical aspects to help students to appreciate the legal aspects, principles of etiquette and ethical behaviors of the nursing profession.

(Infection control)

This course aims to provide postgraduate diploma students with the advanced concepts, principles and measures of infection control to effectively apply it to protect emergency and critically ill patients.

Postgraduate nursing courses in oncology nursing

This course aims to acquire postgraduate diploma students with knowledge and skills to be able to deal effectively with the successive developments of oncology nursing.

(Health Assessment)

This course aims to provide postgraduate diploma students with knowledge and competencies required to provide a complete health assessment for oncology patients by conducting an interview and complete physical examination to meet the needs of patients according to their health problems.

(Communication skills)

This course aims to provide postgraduate diploma students with concepts and models of communication skills for students and identifying barriers to effective communication with cancer patients.

(New trends in nursing field)

This course aims to help postgraduate diploma students to understand new trends of oncology nursing, prepare them for these directions and shift the focus from disease management to focus on partnering with patients to achieve wellness and enhance quality of care.

(Nursing informatics)

This course aims to improve postgraduate diploma students' ability to optimize the use of the new electronic system, nursing science information and to explore its applications in oncology nursing care and research to develop better health information systems.

(Oncology Medicine)

This course aims to improve postgraduate diploma students' ability to focus on best practices for oncology nurses designed to cover many topics including different forms of cancer, pathophysiology, risk factors, risk reduction, genetics,

signs and symptoms, environmental influences, screening, diagnosis, medical and surgical treatments, and its impact on family and society, professional practice and preventive measures.

(Health education)

This course aims to acquire postgraduate diploma students with advanced concepts, principles and health education methods that help them disseminate proper health concepts for oncology patients and their families as well as, improve patients' health and reduce morbidity and mortality rates.

(Oncology nursing)

This course aims to help postgraduate diploma students to have decision-making skills and evaluation to create nursing treatment plans for oncology patients and to learn about their treatment procedures.

(Oncology surgery)

This course aims to help postgraduate diploma students to acquire advanced surgical procedure for oncology patients, identify the different diagnosis, pre- and post-operative care, nutrition, surgical wounds, and care of surgical openings.

(Psychological and social aspects of oncology patients)

This course aims to acquire postgraduate diploma students with psychological, and social aspects of cancer patients during all stages of cancer, from diagnosis until death or survival, in addition to improve students' ability to apply support strategies for patients and their families.

Modern technologies and different treatment methods for oncology patients)

This course aims to improve postgraduate diploma students the ability to follow- up of cancer patients through modern, acceptable and safe information technology and equip them with all different therapeutic methods for oncology patient to improve patient nursing care.

(Infection control)

This course aims to provide postgraduate diploma students with the advanced concepts, principles and measures of infection control to effectively apply it to protect cancer patients and to improve infection prevention.

(Legal and ethical aspects in oncology nursing)

This course aims to provide postgraduate diploma students with the legal and ethical aspects that nurses will encounter when caring for cancer patients.

Postgraduate diploma in obstetric and gynecological nursing

(Gynecology Nursing)

This course aims to acquire postgraduate diploma students with knowledge and practical skills to be able to deal effectively with the successive developments in the gynecology nursing.

(Obstetric medicine)

This course aims to provide postgraduate diploma students with advanced knowledge cover many different aspects of gynecology, pathophysiology, risk factors, risk reduction, signs, symptoms, environmental impacts, examination, diagnosis, medical and surgical treatments to provide nursing care for women.

(Health Assessment)

The course aims to provide postgraduate diploma students with the advanced knowledge and competencies required to provide a complete health assessment of women through physical examination in simulated and actual environments to meet the needs of patients according to their health problems.

(Therapeutic Nutrition in gynecology nursing)

This course aims to provide postgraduate diploma students with the advanced knowledge related to therapeutic nutrition science for women in illness and health.

(Legal and ethical aspects in Gynecology nursing)

This course aims to provide provide postgraduate diploma students with the moral and ethical aspects in accordance with the laws and regulations, taking into account privacy and its application during providing nursing care for women

(Communication skills)

This course aims to provide postgraduate diploma students with concepts and models of communication skills for students and identifying barriers to apply effective communication with women.

(Gynecology Nursing)

This course aims to provide postgraduate diploma students with advanced knowledge and skills in gynecological nursing to provide comprehensive and quality of nursing care for women.

(Obstetric medicine)

This course aims to provide postgraduate diploma students with advanced knowledge related to the pathology of the female reproductive system and how to treat them in order to understand normal and abnormal conditions especially for pregnant women and to apply this knowledge to provide advanced nursing care to women.

(Pharmacology in gynecology)

This course aims to provide postgraduate diploma students with advanced knowledge related to drugs that treat different body disorders for women and their effects on the different body systems and the uses of each of them in the treatment of different diseases and drug interactions in addition to the factors that affect the effectiveness of drugs.

(Nursing informatics of gynecology nursing)

This course aims to improve postgraduate diploma students' ability to optimize the use of the new electronic system, nursing science information and to explore its applications in gynecology nursing care and research to develop better health information systems.

(Health education of gynecology nursing)

This course aims to provide postgraduate diploma students with advanced knowledge to provide health education to women through awareness meetings and diagnostic programs for treating gynecological diseases.

(Infection control of gynecology nursing)

This course aims to provide postgraduate diploma students with advanced concepts and principles of infection control to prevent infectious diseases through commitment to apply precautionary and preventive measures in accordance with international standards for infection control .

Postgraduate diploma in obstetric and family planning nursing

(Obstetric and family planning nursing)

This course aims to provide postgraduate diploma students with advanced knowledge and skills to provide comprehensive nursing care during labour to preserve the health of women and provide family planning services in the light of evidence based practice.

(Reproductive physiology)

This course aims to provide postgraduate diploma students with advanced knowledge to help them to understand the physiological changes accompanying women during pregnancy and dealing with them.

(Health Assessment)

The course aims to provide postgraduate diploma students with the advanced knowledge and competencies required to provide a complete health assessment of women during childbirth or family planning through physical examination in simulated and actual environments to meet the needs of patients according to their health problems.

(Modern technologies in obstetric and family planning nursing)

This course aims to acquire the postgraduate diploma students with different therapeutic methods, information technology and clinical information to obtain and manage data, convert data into actionable information, and then publish this information so that it can be used effectively to improve women care during childbirth or family planning

(Legal and ethical In aspects in obstetric and family planning nursing)

This course aims to acquire the postgraduate diploma students with legal and ethical aspects to help students to appreciate the legal aspects, principles of etiquette and ethical behaviors of the nursing profession to provide comprehensive nursing care for pregnant women in the fields of childbirth and family planning with commitment to the legal aspects.

(Communication skills)

(Obstetric and family planning nursing)

The course aims to provide postgraduate diploma students with the advanced knowledge and practical skills competencies to prepare them to provide quality of nursing care for women during child birth and family planning.

(New trends in obstetrics and family planning)

This course aims to provide postgraduate diploma students with knowledge related to new trends in obstetrics and family planning to be applied during the provision of nursing care during childbirth and family planning.

(Nursing informatics)

This course aims to provide postgraduate diploma students with knowledge related to information systems in the management of childbirth nursing and family planning and their information technology.

(Pharmacology)

This course aims to provide the student with advanced knowledge and intellectual skills related to drugs interaction, effects, drug interactions, and precaution of uses during childbirth and family planning, in addition to the factors that affect the effectiveness of drugs.

Infection control in delivery room And family planning

This course aims to provide postgraduate diploma students with the advanced concepts, principles and measures of infection control to effectively apply it to controlling infection in the birth room and family planning.

(Health education in obstetric and family planning)

This course aims to provide postgraduate diploma students with advanced concepts of health education that help them to disseminate proper health concepts for to women during the stages of childbirth and family planning.

Postgraduate diploma courses in critical care and emergency nursing for neonate

(Emergency and critical nursing Of neonate)

This course aims to equip the postgraduate diploma students with advanced knowledge and skills to care for premature infants with birth defects, congenital anomalies, and major surgical problems, in addition to providing basic knowledge resuscitation and physical and psychological monitoring of newborn.

(Neonates health assessment)

This course aims to provide the postgraduate diploma students with knowledge and to conduct regular health assessment and screening for neonate.

(Neonates critical and emergency Medicine)

This course aims to provide the postgraduate diploma students with knowledge related to critical care and emergency medicine for neonates.

(Legal and ethical aspects in Neonates emergency and critical nursing)

This course aims to provide the postgraduate diploma students with aspects related to ethical and legal issues in emergency and critical nursing care of neonates

(Communication skills)

This course aims to equip the postgraduate diploma students with the concepts and theories of communication skills to be able to communicate effectively with neonates caregivers.

(Infection control in pediatric care units)

This course aims to equip the postgraduate diploma students with preventive measures of infection control, as well as how to store and dispose of biological waste from child care units.

(Pediatric emergency and critical care)

This course aims to equip the postgraduate diploma students with knowledge and skills of pediatric emergency and critical care to improve health care provided to neonate .

(Nursing informatics)

This course aims to improve postgraduate diploma students' ability to optimize the use of the new electronic system, nursing science information and to explore its applications in neonates nursing care and research to develop better health information systems.

(Developmental care and psychological care of neonates)

This course aims to provide postgraduate diploma students with the knowledge of neonates developmental and psychological care needed to provide evidence-based nursing care for neonates during health and illness .

(Pharmacology for critical cases of neonates)

This course aims to equip postgraduate diploma students with knowledge about drugs its action, side effects, interaction and precaution during using for neonate.

(Health education)

This course aims to acquire postgraduate diploma students with advanced concepts, principles and health education methods that help them disseminate proper health concepts for neonates caregivers.

Modern technology and different treatment methods for critical cases of neonates)

This course aims to acquire the postgraduate diploma students with different therapeutic methods, information technology and clinical information to obtain and manage data, convert data into actionable information so that it can be used effectively to improve neonates care in intensive care and emergency unit.

Postgraduate diploma courses in pediatric oncology nursing

(Pediatric oncology nursing)

The course aims to equip postgraduate diploma students with advanced scientific nursing knowledge and skills related to childhood cancer, its diagnosis and treatment to proper nursing care for children .

Health assessment of pediatric oncology

This course aims to equip postgraduate diploma students with the knowledge to conduct regular screening of pediatric oncology through a comprehensive perspective on the health status of children .

(Pediatric oncology)

This course aims to provide postgraduate diploma students with advanced knowledge related to pediatric oncology.

(Nursing informatics in pediatric oncology)

This course aims to provide postgraduate diploma students with knowledge of information technology in pediatric oncology .

(Communication skills)

This course aim to equip postgraduate diploma students with ability to demonstrate effective communication skills with children.

(Health education in pediatric oncology)

This course aim to equip postgraduate diploma students with knowledge and practice regarding health education in pediatric oncology .

(Pediatric oncology nursing)

course aims to equip postgraduate diploma students with the knowledge, skills, and attitude to provide competency-based care for children in health and disease from birth to adolescence.

(Surgery of pediatric oncology)

This course aims to equip postgraduate diploma students with knowledge and skills related to pediatric tumor surgeries.

(Psychological and social aspects for families of children with pediatric oncology)

This course aims to equip postgraduate diploma students with the ability to provide social and psychological support to children and their family.

(Oncology modern techniques and treatment methods for children)

This course aims to equip postgraduate diploma students with comprehensive knowledge, and attitude to provide competency-based nursing care for children with tumors.

(Infection control in pediatric oncology)

This course aims to provide postgraduate diploma students with the advanced concepts, principles and measures of infection control to effectively apply it to protect children.

(Ethical and Legal aspects of pediatric nursing)

This course aims to acquire the postgraduate diploma students with legal and ethical aspects to help students to appreciate the legal aspects, principles of etiquette and ethical behaviors during dealing with children and their families and in nursing profession.

Postgraduate diploma courses in community health nursing

(Community Health Nursing)

This course aims to provide the postgraduate diploma students with advanced knowledge and intellectual, behavioral and practical skills for community development and preserving a healthy environment.

(Preventive Medicine)

This course aims to provide the postgraduate diploma students with preventive medicine knowledge to be able to provide comprehensive nursing care to all members of community.

(Health assessment)

This course aims to prepare the postgraduate diploma students to be able to assess the health status of an individual, family, community and the surrounding environment.

(Population Studies)

This course aims to provide the postgraduate diploma students with knowledge related to population studies to be able to provide comprehensive nursing care to community members.

(Community Health Nursing)

This course aims to provide the postgraduate diploma students with advanced knowledge and skills related to community health nursing to able to master the provision of nursing care to the individual, family and society.

(Preventive Medicine)

This course aims to provide the postgraduate diploma students with advanced preventive medicine knowledge to be able to prevent and limit the spread of endemic and emerging diseases.

(Epidemiology)

This course aims to provide the postgraduate diploma students with advanced knowledge in epidemiological sciences and the application of scientific research in the prevention of infectious diseases.

(Nursing Informatics)

This course aims to improve the postgraduate diploma students' ability to optimize the use of the new electronic system, nursing science information in community health nursing.

(Communication skills)

This course aims to equip the postgraduate diploma students with the concepts and theories of communication skills to be able to communicate effectively with individual and families and communities

(Legal and ethical aspects in Nursing)

This course aims to prepare equip the postgraduate diploma students to be able to adhere to ethical principles while providing nursing care to the individual, family and community.

(Health education)

This course aims to prepare the postgraduate diploma students with the information to be able to give health education to different groups of community.

(Psychology)

This course aims to provide the postgraduate diploma students with knowledge and skills related to the psychological aspects that enable him to cooperate with different groups in the community in the case of health and disease.

Postgraduate diploma courses in home health care nursing

(Home health care Nursing)

This course aims to provide the postgraduate diploma students with advanced knowledge and intellectual, behavioral and practical skills that enable them to provide home health care nursing to families.

(Home health care Nursing)

This course aims to provide the postgraduate diploma students with advanced knowledge and practical skills that enable them to provide competent home health care nursing to families

(Preventive Medicine)

This course aims to provide the postgraduate diploma students with e concepts and functions of preventive medicine to be able to prevent infectious diseases among the family members

(Health assessment)

This course aims to prepare the post graduate diploma students to be able to assess the current health of the individual, the family, and the home environment and surrounding the home

(Population Studies)

This course aims to provide the post graduate diploma students with knowledge related to population studies to be able to provide comprehensive home health nursing care to the families.

(Preventive Medicine)

This course aims to prepare the post graduate diploma students to be able to master prevention and control the spread of infectious diseases among family.

(Epidemiology)

This course aims to provide the student with advanced information and skills in epidemiological sciences and the application of scientific research in the prevention of family members from infectious diseases.

(Nursing Informatics)

This course aims to improve the postgraduate diploma students' ability to optimize the use of the new electronic system, nursing science information for home health care nursing.

(Communication skills)

This course aims to provide the postgraduate diploma students with scientifically sound to be able to use various communication skills while providing nursing care to the individual, and families.

(Legal and ethical aspects in Nursing)

This course aims to prepare postgraduate diploma students with scientifically sound to be able to adhere to ethical principles while providing nursing care to the individual and family.

(Healthy education)

This course aims to provide the postgraduate diploma students with concepts, principles health education methods that enable the students to give health education to family members.

(Psychology)

This course aims to provide the postgraduate diploma students with knowledge related to the psychological science to be able to cooperate with different family members

Postgraduate diploma courses in mental health nursing

Psychiatric health nursing

This course aims to acquire postgraduate diploma students with the concepts of health and mental illness as well as providing students with fundamental theories about the most important psychiatric illnesses and the role of the psychiatric health nurse, theories of personality development and various treatment methods, Also it aims to provide the student with the knowledge, skills and attitudes necessary to enhance psychiatric health concepts for the individual, family and society.

(Psychiatry)
